JavaScript, HTML5, CSS3, Node.js, jQuery, Bootstrap, PHP, C++, React, Ruby

### Systems and Databases:

Git/Github, MySQL, MongoDB, PostgreSQL

### Spoken/ Written Language Skills:

English (Native Speaker)  
Tagalog (Immersed Learning)

## PROJECTS

### Lionsgate Scaffolding Web-App - PHP

March 2016 - Present

The company I was working for was in a tight situation, so I helped them out. I spent months teaching myself PHP, MySQL, JavaScript, HTML, and CSS. Before too long, I went from zero coding experience to having made a web-app, complete with form submissions, pdf uploads, sms and email notifications. The company I made it for is still using it to this day.

### Asteroids (Student Project) - C++

May 2018 - June 2018

If a program could be a cover song, this would be my rendition of the classic Atari hit, Asteroids.

### Tut-Bucket (Student Project) - Node/ JavaScript/ jQuery

August 2018

A web-app that allows learners to save learning resources like tutorials, blogs and videos in a central place that is publicly available to any user. This was a group project of three. I was mainly responsible for displaying the user page and ensuring its functionality, handling the likes, ratings, and comments functionality on each resource, displaying the categories buttons, and ensuring the overall quality of the styling and images.

# JOTHAM YELLE

## Junior Full-Stack Web Developer

Junior full-stack web developer who is always learning and ready to take on a challenge. Beginning my web-dev journey in PHP, I gained an increasing love for learning languages and solving problems. Self-motivated and determined with an open mind for change and opportunity. Being interested in creating things from the ground up, I am passionate about the end goal, and I enjoy every step of the journey.

## EMPLOYMENT

### Lionsgate Scaffold Ltd

July 2015 - July 2018

- Worked in a growing startup environment that allowed me to develop in many diverse areas such as:
  - Website and web-app developement and maintenance
  - Labour positions
  - Forklift and 3-ton truck operation
- Took initiative to pick up projects where possible
- Often took the lead and set the pace at any given job site
- Regularly enjoyed working in a team setting
- Consistently exceeded job expectations

## EDUCATION

### Lighthouse Labs (Web Development Diploma)

July 2018 - Oct 2018

An intense, hands-on web development bootcamp, where I learned and developed skills working with JavaScript, HTML, CSS, Node, Express, Bootstrap, Knex, PostgreSQL, MongoDB, jQuery, and more. The hands-on approach and readily-available mentorship allowed me to learn quickly while I practiced writing clean, readable, and modular code. I've gained an appreciation for writing DRY code and keeping things organized. One of the most helpful aspects to this program was the experience I gained with git/GitHub and team collaboration.

### Brigham Young University - Idaho (Online Bachelor Degree Program in Software Engineering)

Sept 2017 - Present

I have always enjoyed online learning. Within my first year here, I've studied object-oriented programming, coupling and cohesion, and database structures using the C++ language and a MySQL database.

### Nimbus School of Recording & Media (Audio Engineering Diploma)

Sept 2013 - Aug 2014

Having had access to 5 professional-rate studios and mentorship from industry professionals allowed me to rapidly increase my audio engineering skills. I became fluent in recording, editing, mixing, producing, and mastering audio with a specialization in sound for video games and film. While I've always been passionate about audio, it was while creating sounds for video games that I developement an appreciation for software development and decided to pursue a career in this field.
